PUT DENGUE IN YOUR DIFFERENTIAL

Has your patient **recently traveled** to any of the following affected areas?

Africa, Asia, Pacific Islands, South America, Central America, the Caribbean, or **Mexico**

In addition to **high fever**, does your patient have any of the following signs and symptoms?

Severe aches and pains (headache, eye pain, joint, muscle or bone pain), rash, nausea, vomiting, mild bleeding, thrombocytopenia or elevated hematocrit

If YES to both, test and treat for dengue!

TEST AND TREAT

Order RT-PCR **if ≤5 days** after illness onset

Order ELISA (serology) **if ≥5 days** after illness onset

Also consider testing for chikungunya or West Nile Virus

For more information, visit www.cdc.gov/dengue

No specific treatment is available for dengue.

DO—manage fever, early signs of shock and hemorrhage, fluid balance DON'T—administer corticosteroids or NSAIDS, excessive fluid therapy, or platelet transfusions

TEST AND TREAT
